**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-42, drawn to a system and method for providing pressurized water jets to a tub, classified in class 4, subclass 541.3.
  - II. Claims 43-48, drawn to a pressure relief valve, classified in class 251, subclass 264.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the system for providing pressurized water to a tub does not require a diverter (a pressure relief valve) has an orifice cover mounted over the valve body and on a first rod, a second rod connected to the first rod, wherein the second rod is connected to a valve actuator, and means for varying the resistance to deflection of the orifice cover. The subcombination has separate utility such as a pressure relief valve in fluid handling systems other than bathing systems.

Art Unit: 3751

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

4. A telephone call was made to the attorney of record on November 15, 2004 to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
